

Health Safety Net/Free Care and Prescriptions

In order for your prescription to be covered by Health Safety Net:

- You **MUST** receive care from a Health Safety Net approved hospital or community health center.
- The hospital or community health center **MUST** have an outpatient pharmacy within the facility.
- The prescribing medical provider **MUST** be affiliated with the hospital or community health center. This can be confusing at many hospitals, since many doctors are not actual employees of the hospital, even if they practice there. To be sure, ask your medical provider.

****Remember****

Health Safety Net **DOES NOT** cover prescriptions from local retail pharmacies such as CVS or Walgreens.
