

Lead Inspector Training Consultant Request for Proposals

Questions and Answers

9/30/2020

Q1 – Will the consultant or BPHC be responsible for sample analysis? If the consultant is responsible, what turnaround times will be required for results?

BPHC will be responsible for sending all collected samples for analysis. The awarded consultant will be required to collect samples and instruct the training inspectors in collection, packaging, and chain of custody for collected samples.

Q2 – What XRF equipment will your staff be using once licensed?

Staff will be using the Protec LPA1 Lead Paint Spectrum Analyzer and the Heuresis (now Viken) PB200i XRF Lead Paint Analyzer.

Q3 – Will the apprentices attend the XRF manufacturer's radiation safety training for the XRFs that they will be using once licensed?

The apprentices will have completed the self-study trainings from the manufacturers, but we ask the consultant to provide a hands-on refresher prior to or during the first field inspection.

Q4 – Will the consultant be responsible for US DOT training related to the XRFs?

No, BPHC can complete this training in-house. However, we invite applicants to include this training either as part of the complete proposal or as an optional add-on component.
